DATA AND ARTIFICIAL INTELLLIGENCE

Cyber Shujaa Program

Week 1 Assignment

Web Scrapping And Data

Handling in Python

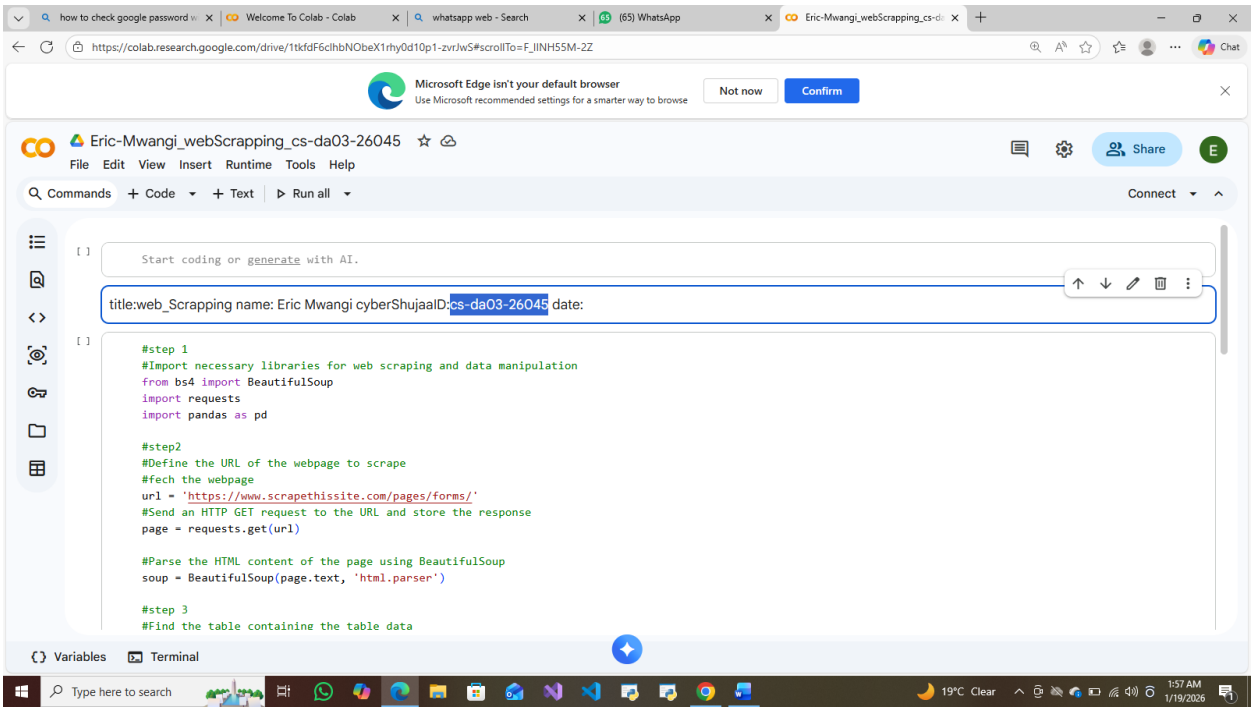
Student Name:Eric Mwangi

Student ID:cs-da03-26045

Introduction

This report outlines the process of scraping hockey team stats from the website https://www.scrapethissite.com/pages/forms/

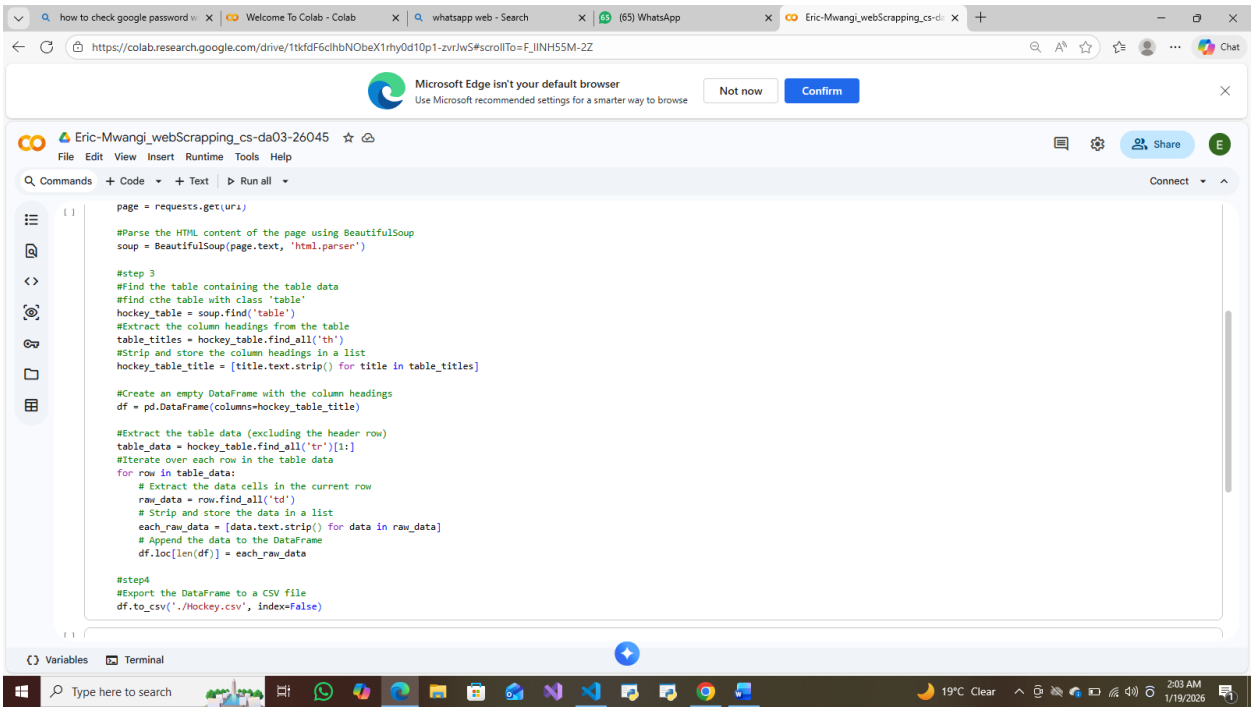
using Python libraries Requests, BeautifulSoup, and pandas.



Methodology

1. Data Extraction: Used requests to fetch the webpage and BeautifulSoup to parse the HTML content.

2. Data Parsing: Extracted the table containing hockey team stats and parsed the column headings and data rows.



Data Storage: Stored the data in a pandas DataFrame and exported it to a CSV file (Hockey.csv).

Conclusion

This week I have engaged my mind and exposure to more python practical extension from what I previously had done. I'm getting curious and am enthusiastic to learn and code more. The program is certainly yielding to my expectations and will definitely walk through till the end.
